reddot design award
honourable mention 2010

Two 'systems' define the armchair: the '3D' metal frame and the 'one piece' tight-tissue assembled to create the best performing position between seating and backrest. While armchair displays a typical furniture 'code' using chromed finishing for metal parts and covering with dense 'textile' the real seat side. The metal profile connections provide to use screws instead welding, giving the possibility to ship the armchair not-assembled saving space on board (kit self-assembly available for retailer).
